Industry Consultancy Cell

Dr. P. Varalakshmi M. Sc., M.Phil., Ph.D Assistant Professor Department of Molecular Microbiology School of Biotechnology Madurai Kamaraj University Madurai – 625021, INDIA E.mail: <u>vara5277@gmail.com</u> pvlakshmi.biotech@mkuniversity.org

Industry consultancy services

Area of Expertise:

- 1. Process development for microalgal biomass development for bioproducts like, Beta carotene, zeaxanthin and astaxanthin using low cost substrates.
- 2. Extraction and characterization of secondary metabolites like anti-diabetic compounds, UV protectants, anti -obesity drugs from Micro and Macroalgae.
- 3. Process development for enhanced enzyme production and characterization.
- 4. Technology developed for hyper lipid accumulation and biodiesel production from algae.
- 5. Strategies for enhanced biopolymer production from algae, bacteria and agro wastes and its applications in drug delivery and bioremediation of wastes.
- 6. Synthesis of biocatalysts from wastes for transesterification.

Contribution in Process/Product development and Technology Transfer:

- Developed low cost technologies for hyper lipid accumulation for biodiesel production in algae
- Developed technology for beta carotene accumulation in microalgae using different nutrient sources.
- Identified a suitable strategy for targeted drug delivery using quantum dots and nanoparticles from wastes.
- Employed a new strategy for purification of phycocyanin from cyanobacteria.
- Developed methods for algal biomass development using organic supplements.
- Technology transferred for hyper beta carotene accumulation in green microalgae.

Consultancy services can be given for:

- Products from Algae (Microalgae, *Spirulina* sp *Dunaliella* sp, *Sargassum* sp, *Turbunaria* sp, *Padina* sp etc).
- High protein, lipid and pigment accumulation in cyanobacteria and green algae. Biomass development using low cost technologies.

- Extraction of high value products (astaxanthin) from micro and macroalgae. Production of Algal biofertilizer, phycosorbents, biopolymers etc.
- Utilizing algae to treat industrial effluents containing heavy metals an alternative to the existing practice of using other biosorbents and physic-chemical methods.
- Phycoremediation technology for industrial waste water treatments.
- Separation of polyphenols from algae.
